

CONSEC Original Wire Sawing System

New method of CONSEC ORIGINAL DRY WIRE SAWING SYSTEM is an innovative construction method which cuts reinforced concrete construction same speed as wet cutting by applying dedicated DRY diamond wire by installing Intake Guide Pulley Assy. Cyclone Dust Collector, Dust Collector, Nozzle Pulley Assy., and Water Tank to Hydraulic Small Wire Saw DSM-10A.

Features

- 1 It is not necessary to clean for curing work place and slurry water due to not generating slurry water in DRY construction method.
- 2 Cutting dust is collected directly into the collection bag, so it will be easier for cleaning.
- 3 Cooling water is needed only 5 Litter per hour for diamond wire.
- 4 Dedicated DRY diamond wire is a cooling fin formation, and the fin can also carry cutting dust.

Practical application

- 1 No worry for leaking water due to low noise, so you can do business operation at first floor and can work for cutting work at second floor.
- 2 The efficiency of cutting work for the foundation pillar is improved by seismic isolation retrofit method at the underground due to not generating a lot of slurry water.
- 3 It is possible environmentally friendly work due to no necessary for setting oil fence for breaking down of bridge which is built across a river.
